SMART INDIA HACKATHON 2026 · WIREFRAME PACK

MeghDrishti

Tell a real storm from a broken sensor.

Dashboard | Live monitor | Alerts | Network map | Sensor health | Maintenance | Analysis | History | Admin | Settings

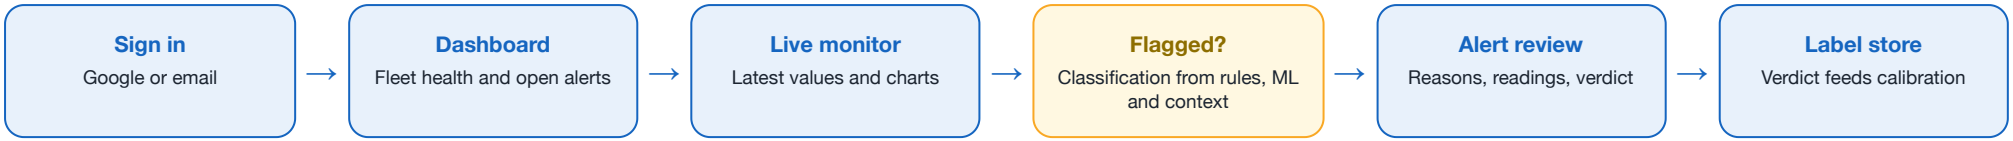

Version 1.0 · Low-fidelity layout with high-fidelity styling

Screens: login, dashboard, live monitor, alerts, network, sensor health, maintenance, analysis, history, admin, settings

OVERVIEW

User flow

From sign-in to operator verdict. Each screen is its own route in the app.

Classification states

- **NORMAL**: nothing unusual
- **WATCH**: mildly unusual
- **SUSPICIOUS**: unusual and unexplained
- **PROBABLE_SENSOR_FAULT**: rules or model point at the instrument
- **LIKELY_GENUINE_EXTREME**: context agrees it is real weather
- **INSUFFICIENT_CONTEXT**: no evidence either way

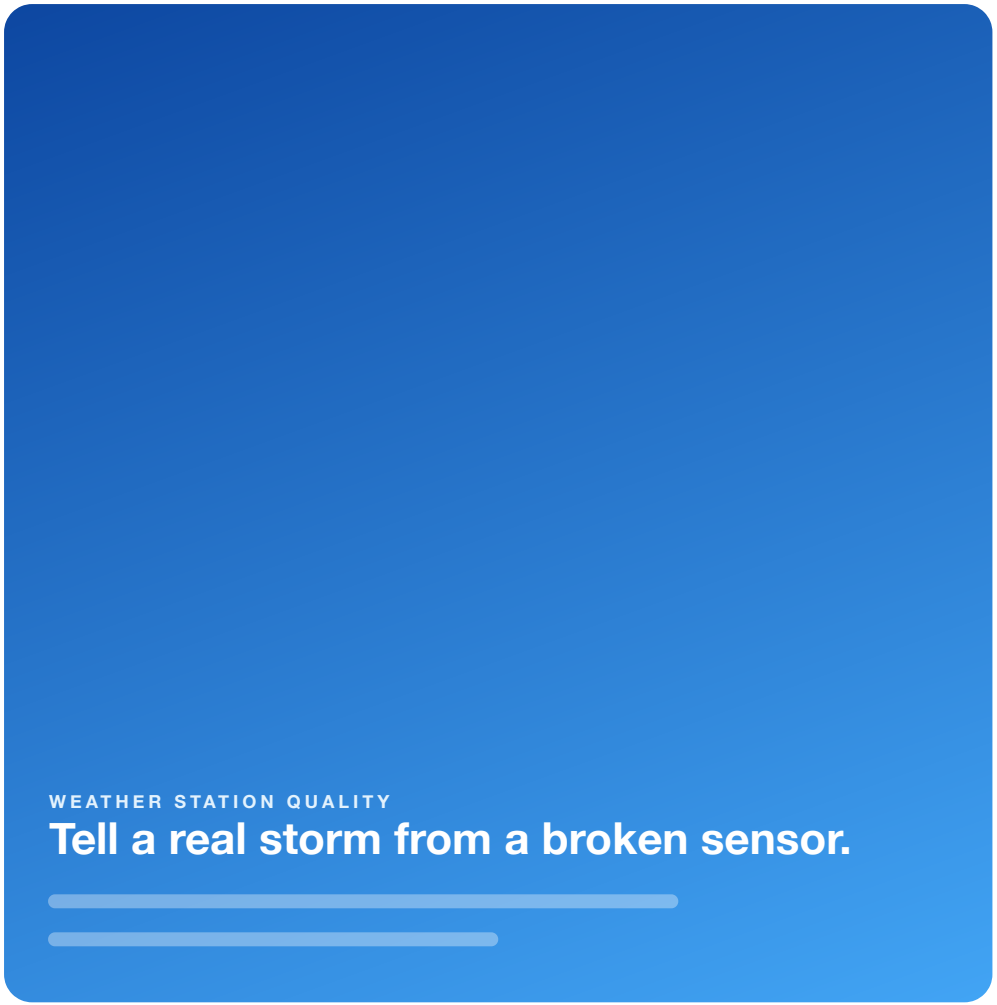

Design rules

- One screen, one route, one node on the canvas
- Raw observations shown as received, never edited
- Every alert shows its reason codes
- Operator verdict is one click from the alert drawer
- Red = fault, amber = watch, green = genuine or normal
